Section 3  Hazards Identification

Eye Contact: Potassium permanganate is damaging to eye tissue on contact. It may cause severe burns that result in damage to the eye.

Inhalation: Acute inhalation toxicity data are not available. However, airborne concentrations of potassium permanganate in the form of dust or mist may cause damage to respiratory tract.

Skin Contact: Contact of solutions at room temperature may be irritating to the skin, leaving brown stains. Concentrated solutions at elevated temperature and crystals are damaging to the skin.

Ingestions: Potassium Permanganate, if swallowed, may cause severe burns to mucous membranes of the mouth, throat, esophagus and stomach.
Section 4 First Aid Measures

**Eyes:** Immediately flush eyes with large amounts of water for at least 15 minutes holding lids apart to ensure flushing the entire surface. Do not attempt to neutralize chemically. Seek medical attention immediately. Note to physician: Soluble decomposition products are alkaline. Insoluble decomposition product is brown manganese dioxide.

**Skin:** Immediately wash contaminated areas with large amounts of water. Remove contaminated clothing and footwear. Wash clothing and decontaminate footwear before reuse. Seek medical attention immediately if irritation is severe or persistent.

**Inhalation:** Remove person from contaminated area to fresh air. If breathing has stopped, resuscitate and administer oxygen if readily available. Seek medical attention immediately.

**Ingestion:** Never give anything by mouth to an unconscious or convulsing person. If person is conscious, give large quantities of water. Seek medical attention immediately.

Section 5 Fire Fighting Measures

**NFPA*HAZARD SIGNAL**

<table>
<thead>
<tr>
<th>Health Hazard</th>
<th>1 = Materials which under fire conditions would give off irritating combustion products.</th>
</tr>
</thead>
<tbody>
<tr>
<td>(less than 1 hour exposure)</td>
<td>Materials, which on the skin could cause irritation.</td>
</tr>
<tr>
<td>Flammability Hazard</td>
<td>0 = Materials that will not burn.</td>
</tr>
<tr>
<td>Reactivity Hazard</td>
<td>0 = Materials which in themselves are normally stable, even under fire exposure conditions, and which are not reactive with water.</td>
</tr>
<tr>
<td>Special Hazard</td>
<td>OX = Oxidizer</td>
</tr>
</tbody>
</table>

*National Fire Protection Association 704

**FIRST RESPONDERS:**

**FLASHPOINT** None

**FLAMMABLE OR EXPLOSIVE LIMITS** Lower: Nonflammable  Upper: Nonflammable

**EXTINGUISHING MEDIA** Use large quantities of water. Water will turn pink to purple if in contact with potassium permanganate. Dike to contain. Do not use dry chemicals, CO₂, Halon® or foams.
Section 5  Firefighting Measures (cont.)

SPECIAL FIREFIGHTING PROCEDURES

If material is involved in fire, flood with water. Cool all affected containers with large quantities of water. Apply water from as far a distance as possible. Wear self-contained breathing apparatus and full protective clothing.

Section 6  Accidental Release Measures

STEPS TO BE TAKEN IF MATERIAL IS RELEASED OR SPILLED

Clean up spills immediately by sweeping or shoveling up the material. Do not return spilled material to the original container. Transfer to a clean metal drum. These wastes must be deactivated by reduction. To clean floor, flush with abundant quantities of water into sewer, if permitted by Federal, State and Local regulations. If not permitted, collect water and treat chemically (Section 13).

PERSONAL PRECAUTIONS

Personnel should wear protective clothing suitable for the task. Remove all ignition sources and incompatible materials before attempting clean up.

Section 7  Handling and Storage

WORK/HYGENIC PRACTICES

Wash hands thoroughly with soap and water after handling potassium permanganate, and before eating or smoking. Wear proper protective equipment. Remove contaminated clothing.

VENTILATION REQUIREMENTS

Provide sufficient area or local exhaust to maintain exposure below the TLV-TWA.

CONDITIONS FOR SAFE STORAGE

Store in accordance with NFPA 430 requirements for Class II oxidizers. Protect containers from physical damage. Store in a cool, dry area in closed containers. Segregate from acids, peroxides, formaldehyde and all combustible, organic or easily oxidizable materials including antifreeze and hydraulic fluid.
Section 8  Exposure Controls/Personal Protection

**Respiratory Protection:**
In the case where overexposure may exist, the use of an approved NIOSH/MSHA dust respirator or an air-supplied respirator is advised. Engineering or administrative controls should be implemented to control dust.

**Eye Protection:**
Faceshield, goggles, or safety glasses with side shields should be worn. Provide eyewash in working area.

**Protective Gloves:**
Rubber or plastic gloves should be worn.

**Other Protective Clothing or Equipment:**
Regular work clothing covering arms and legs and a rubber or plastic apron should be worn.

Section 9  Physical/Chemical Characteristics

**Appearance and Odor:** Dark purple solid with a metallic luster, odorless

**Boiling Point, 760 mm Hg:** N/A

**Vapor Pressure (mm Hg):** N/A

**Solubility in % By Solution:** 6% at 20°C (68°F), and 20% at 65°C (149°F)

**Percent Volatile by Volume:** Not volatile

**Evaporation Rate (Butyl Acetate = 1):** N/A

**Melting Point:** Starts to decompose with evolution of oxygen (O₂) at temperatures above 150°C (302°F). Once initiated, the decomposition is exothermic and self-sustaining.

**Oxidizing Properties:** Strong oxidizer

**Specific Gravity:** 2.7 @ 20°C (68°F)

**Vapor Density (AIR=1)** N/A
Section 10  Stability and Reactivity

**Solubility:** Under normal conditions, the material is stable.

**Conditions to avoid:** Contact with incompatible materials or heat (>150ºC/302ºF).

**Incompatible Materials:** Acids, peroxides, formaldehyde, anti-freeze, hydraulic fluids, and all combustible organic or readily oxidizable inorganic materials including metal powders. With hydrochloric acid, toxic chlorine gas is liberated.

**Hazardous Decomposition Products:** When involved in fire, potassium permanganate may liberate corrosive fumes.

**Conditions Contributing to Hazardous Polymerization:** Material is not known to polymerize.

Section 11  Toxicological Information

Potassium permanganate:  Acute oral LD$_{50}$(rat) = 780 mg/kg Male (14 days); 525 mg/kg Female (14 days)

The fatal adult human dose by ingestion is estimated to be 10 grams. (Ref. Handbook Of Poisoning: Prevention, Diagnosis & Treatment, Twelfth Edition)

**EFFECTS OF OVEREXPOSURE**

**Acute Overexposure**
Irritating to body tissue with which it comes into contact.

**Chronic Overexposure**
No known cases of chronic poisoning due to potassium permanganate have been reported. Prolonged exposure, usually over many years, to heavy concentrations of manganese oxides in the form of dust and fumes, may lead to chronic manganese poisoning, chiefly involving the central nervous system.

**Carcinogenicity**
Potassium permanganate has not been classified as a carcinogen by OSHA, NTP, IARC.

**Medical Conditions Generally Aggravated by Exposure**
Potassium permanganate will cause further irritation of tissue, open wounds, burns or mucous membranes.

CAIROX®
potassium permanganate
MATERIAL SAFETY DATA SHEET

Section 12  Ecological Information

**Entry to the Environment**
Potassium permanganate has a low estimated lifetime in the environment, being readily converted by oxidizable materials to insoluble MANGANESE DIOXIDE (MnO₂).

**Bioconcentration Potential**
In non-reducing and non-acidic environments MnO₂ is insoluble and has a very low bioaccumulative potential.

**Aquatic Toxicity**
Rainbow trout, 96 hour LC₅₀: 1.80 mg/L
Bluegill sunfish, 96 hour LC₅₀: 2.3 mg/L

Section 13 Disposal Considerations

**Deactivation of D001 Ignitable Waste Oxidizers by Chemical Reduction**
Reduce potassium permanganate in aqueous solutions with sodium thiosulfate (Hypo), or sodium bisulfite or ferrous salt solution. The bisulfite or ferrous salt may require some dilute sulfuric acid to promote rapid reduction. If acid was used, neutralize with sodium bicarbonate to neutral pH. Decant or filter, and mix the sludge with sodium carbonate and deposit in an approved landfill. Where permitted, the sludge can be drained into sewer with large quantities of water. Use caution when reacting chemicals. Contact Carus Chemical Company for additional recommendations.
